

# INTRODUCTION

L'histoire d'ArtLine est intimement liée au parcours du shaper Brice Anziutti. En 2011, il crée Artline avec l'idée précurseur de casser les codes conventionnels hérités de la falaise. La prise ne doit plus imiter le rocher mais susciter l'envie de grimper par le design.

ArtLine s'impose peu à peu comme une marque incontournable et inspire la transition de l'escalade qui se scinde entre indoor et outdoor. De nombreuses marques émergent alors sur le marché mais ArtLine reste fidèle à sa baseline : Unique Shapes. Cette démarche lui vaut de rester original en sortant des produits créatif et innovants.

ArtLine's story is closely bound to that of the shaper Brice Anziutti. In 2011, he created ArtLine with the pioneering idea of breaking with the traditional codes dictated by outdoor climbing. Instead of holds imitating rock, their design should spark a desire to climb.

ArtLine gradually established itself as a key brand and inspired a transition in the sport, with a split between indoor and outdoor climbing. Many new brands have since come on to the market, but ArtLine has stuck faithfully to its baseline: Unique Shapes. It is this approach that has ensured the brand remains original, with creative, innovative products.

# TECHNOLOGIES / TECHNOLOGY

Notre volonté est de développer sans cesse des produits plus performants et innovants afin de mieux répondre aux besoins exprimés par nos clients. Nos systèmes et procédés de fabrication sont conformes aux exigences de la norme EN 12572-3 et permettent à nos usagers de bénéficier du meilleur de la technologie en pratiquant une escalade en toute sécurité.

*We are committed to developing ever more innovative and high quality products, in response to the input we get from our customers. Our manufacturing systems and procedures meet the EN 12572-3 european standards, meaning our users will get the best that technology has to offer, and they can climb in complete safety*

Lors de la fabrication, toutes nos prises sont équipées du system «Safety» à partir de la taille M (Ø>5cm).

Une garantie supplémentaire pour nos usagers ! En cas de rupture accidentelle d'une prise, le plus souvent à l'installation, seuls de petits morceaux ne présentant pas de risque pour les utilisateurs peuvent tomber au sol.

*During manufacture, all our holds over size M (Ø>5cm) are equipped with the «Safety» system, which is an extra guarantee for our users! Should a hold accidentally break (most often during installation), only very small pieces will break off, with no risk to any users on the ground.*

CHC ou FHC ?

Dorénavant la question ne se pose plus !

Peu importe le type de visserie que vous utilisez, les prises ArtLine équipées du system «Insert» sont compatibles avec des vis têtes plates et/ou coniques.

*Flat-head or countersunk? Who cares!*

*Whatever type of screws & bolts you use, our holds that use the «Insert» system, are compatible with flat-head or tapered screws.*

PE signifie PolyEster. C'est la résine le plus souvent utilisée pour la fabrication des prises d'escalade en Europe. Mélangée à du sable (mortier de résine), elle est colorée puis catalysée pour être déversée dans un moule.

*PE stands for PolyEster.*

*This is the most popular resin for making handholds in Europe. Mixed with sand to create a resin mortar, it is dyed then catalysed and poured into a mould.*

PU signifie PolyUréthane. C'est la résine la plus utilisée aux Etats-Unis. Depuis quelques années le PU fait son apparition en Europe. A l'inverse du PE, elle ne nécessite pas d'être chargée (ou très peu), ce qui explique la légèreté du matériau.

*PU stands for PolyUrethane. This is the most popular resin in the States, and it has made inroads in Europe over the past few years.*

*Unlike PE, it doesn't need to be mixed (or not much), making it very light.*

# TECHNOLOGIES / TECHNOLOGY

Notre volonté est de développer sans cesse des produits plus performants et innovants afin de mieux répondre aux besoins exprimés par nos clients. Nos systèmes et procédés de fabrication sont conformes aux exigences de la norme EN 12572-3 et permettent à nos usagers de bénéficier du meilleur de la technologie en pratiquant une escalade en toute sécurité.

*We are committed to developing ever more innovative and high quality products, in response to the input we get from our customers. Our manufacturing systems and procedures meet the EN 12572-3 european standards, meaning our users will get the best that technology has to offer, and they can climb in complete safety.*

Actuellement, sur le marché des volumes, il est courant d'observer une dégradation prématurée au niveau des vis de fixation. L'utilisation des visseuses à chocs est souvent la cause de ce problème. Tous nos volumes sont équipés d'inserts métalliques visant à prolonger leur durée de vie. Pour la fixation des volumes ArtLine, nous vous recommandons l'utilisation de vis à bois Ø 5mm.

*Currently, in the volume marketplace, we see premature damage around the fixing screws, often caused by percussion screwdrivers. All our volumes are equipped with metal inserts, which ensure longer life. We recommend using Ø 5mm wood screws with ArtLine volumes.*
